NOTES

- Drawn from the parameters: every coloured area is the livery painter's field (model/livery.py) evaluated on the Stage-2 outlines (fuselage OML, glazing, openings, wing, empennage, gear, pod) - never from the mesh.
- Fuselage / fin colours are side-projection curves: a surface point (x, y, z) takes the colour of (y, z), so strokes that reach the crown cross it (plan). Port = mirror of starboard (the photos show the same scheme).
- Knots measured on the photos camera-matched to the model and rectified onto the side projection (+/- 0.03-0.05 mm); the lower nose follows the port photos (the starboard nose is in shade).
- Near wing drawn as photon lines over the fuselage to the livery stays visible; propeller: 2 of 5 blades, schematic; with; nose-gear doors open.
- Estimated: plan-view crossings, winglet line position, lower-surface colours between photos, blade band widths (+/- 10 mm). No logos, lettering or registration marks are drawn.
- Rev B (Stage-4 final judge 11, LV-F1-02): the tail-cone strokes H1, U1, X1, X2, X3, D1 drawn 1.35 x their measured half-heights (0517: white bands, not silver hairlines); LV-F1-01: the light metallic blue #7D92BA (was #8C9C9E, washed out outdoors in photos 188 / 0517).
