VIEW	PHOTO (refs/photos.json id; cand = refs/cache/photos/cand/jpn_first-pc12-pro-hando-*)	USED FOR
starboard 3/4, ground	pro3008_sbd34_pilatus	camera-matched (13 points, 7 px rms), rectified onto the side projection: fuselage strokes, light band, fin cap, tailplane, leg door
starboard, air-to-air	cand_..._PC-12-PRO-N81DW	camera-matched (10 points, 5 px rms): tail-cone strokes, dark wing lower faces, white bullet, pod
port 3/4, hangar	pro3008_port34 (cand_130), cand_..._B2	camera-matched_130 (7 points, 8 px rms) and _B1 (7 points, 11 px): nose band group, light lower nose, blade bands, polished spinner / stacks
port nose, outdoors	cand_..._MSN-3008_188	B1 alone on the cowl, P1 starts as a hairline above B1 under the exhaust (STA ~2.3, 130 / B1 / 0517 too); base blue between them, no navy line; neutral-silver stroke edges
starboard wing, flight	cand_..._IMG_0459	blue wing upper face, black LE boot, blue winglet with a white line, blue pod with a black radome

- NOTES**
- Drawn from the parameters: every coloured area is the livery painter's field (model/livery.py) evaluated on the Stage-2 outlines (fuselage OML, glazing, openings, wing, empennage, gear, pod) - never from the mesh.
 - Fuselage / fin colours are side-projection curves: a surface point (x, y, z) takes the colour of (x, z), so strokes that reach the crown cross it (plan). Port = mirror of starboard (the photos show the same scheme).
 - Knots measured on the photos camera-matched to the model and rectified onto the side projection (+/- 0.03-0.05 m); the lower nose follows the port photos (the starboard nose is in shade).
 - Near wing drawn as phantom lines over the fuselage so the livery stays visible; propeller: 2 of 5 blades, schematic width; nose-gear doors open.
 - Estimated: plan-view crossings, winglet line position, lower-surface colours between photos, blade band widths (+/- 10 mm). No logos, lettering or registration marks are drawn.
