NOTES

1. Drawn from model/interior.py FD_CONSTRUCTION, CREW_SEAT sheepskin_hide / sheepskin_pile and PEDESTAL rim / blend; the 3-D builders read the same values (fd_pedestal.quadrant's rim, stack_shell's blends; seats.py's cover).
2. REVIEW NOTE (rev A): the cover split is a construction fact, not a shape change -- the drawn 34 mm cover and every L6B check on it are unchanged; the pile depth only sets where the viewer's pile shells sit.
3. REVIEW NOTE (rev A): the rim and blend tabulate what the builders had as constants (QUAD frame 14 x 6 R 20, STACK edge_r 12) and add the rolled top R 3 and the R 8 fillet: the rim reads as a cast part.
4. Printing is pad / silk-screen printing of pseudo-text (no readable markings: owner rule); in 3-D a decal 0.15 mm over its surface (model/fd_print.py; fit_check 34).
5. Sources: [S] published data, [M] measured on the s/n 3001 photos, [E] engineering estimate.
