- NOTES**
- Drawn from the parameters: every coloured area is the livery painter's field (model/livery.py) evaluated on the Stage-2 outlines (fuselage OML, glazing, openings, wing, empennage, gear, pod) - never from the mesh.
  - Fuselage / fin colours are side-projection curves: a surface point (x, y, z) takes the colour of (x, z), so strokes that reach the crown cross it (plan). Port = mirror of starboard (the photos show the same scheme).
  - Knots measured on the photos camera-matched to the model and rectified onto the side projection (+/- 0.03-0.05 m); the lower nose follows the port photos (the starboard nose is in shade).
  - Near wing drawn as phantom lines over the fuselage so the livery stays visible; propeller: 2 of 5 blades, schematic width; nose-gear doors open.
  - Estimated: plan-view crossings, winglet line position, lower-surface colours between photos, blade band widths (+/- 10 mm). No logos, lettering or registration marks are drawn.
